

A blue-tinted photograph of a large crab, possibly a coconut crab, resting on a sandy beach. The crab is positioned in the lower-left foreground, facing towards the right. Its large, textured carapace and thick legs are clearly visible. In the background, the ocean waves are breaking, creating white foam against a blue sky. The overall scene is serene and naturalistic.

Thanks!

Observationally Quantified Reconnection Providing a Viable Mechanism for Active Region Coronal Heating
